

A1 displayed on a part of a display device to display call numbers without performing selection and determination operations.--

IN THE CLAIMS

Please amend claims 1-4 by rewriting same to read as follows:

--1. (Amended) A portable information terminal device, comprising:

display means for listing and displaying a plurality of pieces of main information and a display indicator for selecting one of the plurality of pieces of displayed main information;

storage means for storing the plurality of pieces of main information and a plurality of pieces of detailed information respectively corresponding to the plurality of pieces of main information;

A2 selecting means for switching the piece of main information selected by the display indicator in accordance with selection operations inputted via operation means; and

display control means for retrieving the detailed information corresponding to the selected piece of main information from the storage means and displaying the detailed information on a partial area of the display means when the selection operations are not performed for a predetermined period of time while the plurality of pieces of main

information are listed and displayed on the display means.

--2. (Amended) The portable information terminal device according to claim 1, wherein

the display control means scrolls the display of the detailed information when all of the detailed information retrieved cannot be displayed simultaneously on the partial area.

AR
--3. (Amended) The portable information terminal device according to claim 1, wherein

the display control means displays the partial area in a color different from a color of a portion of the display means not containing the partial area.

--4. (Amended) The portable information terminal device according to claim 1, wherein

the display control means blinks and displays the detailed information.--

REMARKS
